

HEDIS® Quick Reference

ADD - Follow-Up Care for Children Prescribed ADHD Medication

ADHD is one of the most common behavioral health disorders in children. To ensure medication is prescribed and managed correctly, it is important that children are carefully monitored by their prescribing provider along with their behavioral health practitioners.

Measure Description

The percentage of children aged 6-12 years with a newly prescribed attention-deficit/hyperactivity disorder (ADHD) medication who had at least three follow-up care visits within a 10-month period.

Two rates are reported:

- 1. Initiation Phase** - The percentage of members 6–12 years of age with an ambulatory prescription dispensed for ADHD medication, who had **one follow-up visit with a practitioner with prescribing authority during the 30-day Initiation Phase.**
- 2. Continuation and Maintenance (C&M) Phase** - The percentage of members 6–12 years of age with an ambulatory prescription dispensed for ADHD medication, who remained on the medication for at least 210 days **AND** who, **in addition** to the visit in the Initiation Phase, had **at least two follow-up visits with a practitioner within 270 days (9 months) after the Initiation Phase ended.**

(Only one of the two visits (during days 31–300) may be an e-visit or virtual check-in)

(Only the Initiation Phase visit must be with a prescribing practitioner)

ADHD Medications

Description	Prescription
CNS stimulants	Dexmethylphenidate, Dextroamphetamine, Lisdexamfetamine, Methylphenidate, Methamphetamine
Alpha-2 receptor agonists	Clonidine, Guanfacine
Miscellaneous ADHD medications	Atomoxetine

Provider Resources

Texas Children's Health Plan has multiple resources for Providers to access 24/7, free of charge at thecheckup.org.
